*Both safe and economical*

### **Dynamic Load System by SpanSet: EasyLash Version with re-useable ratchet**

With the disposable lashing system EasyLash by SpanSet goods transported by container, rail or ship in international shipping are reliably and simply secured. SpanSet has now developed the Dynamic Load System as an extension to the existing EasyLash assortment, which is suitable for multiple usings and makes enables a re-tensioning of the straps during transportation.

A special ratchet: the Dynamic Load Ratchet rather than the usual strap tensioner is part of the system. The yellow-chromated ratchet is equipped with a specially designed bridge with ribbing, into which a non-stitched strap can be threaded. The ribbing structure holds the tension of the strap and reduces the slip to a minimum. In contrast to the strap tensioner of the EasyLash disposable lashing system the Dynamic Load Ratchet remains on the load during transport. In this way it can be re-tensioned at any time. At the destination the ratchet is released and is available for the next transport.

The second component of the Dynamic Load System is the orange-coloured EasyLashtex strap with a minimum break strength of 6000 daN in the strapping. The straps are woven out of high-tenacity polyester and designed for the highest demands of loads. Because of the weaving structure and the thermofixing EasyLashtex achieves the same stability as steel strips but at a much lower weight. The handling is clearly more user-friendly and safer, because when attaching and removing there is no threat of injury from sharp metal edges or recoiling steel bands.

Whereas steel bands can dirty the surface of the load by leaving rust stains, woven lashing straps are also suitable for sensitive surfaces. Transport damage and the costs incurred from that can then be minimized. The EasyLash systems are particularly suitable for the securing of coils when transporting by ship.

You can find further information in the internet under [www.spanset.de](http://www.spanset.de) or directly at the SpanSet stand at the IAA Commercial Vehicles in Hannover. From September 25 to October 02, 2014 you can talk to SpanSet employees at the stand in hall 27 / E22, about products, problem solutions and services, or discuss the branch trends with them.
